## General Walkthrough\*:

1. Sand your wood to your desired smoothness/roundness.
2. For pieces with paper decoupage:  
Trace an outline of your wood craft onto your paper.  
*Make sure that the paper is facing the right way when you trace!*
3. Paint or stain your wood, and let it dry completely before moving on to Step 5.
4. Cut out your paper while the paint is drying. *Make sure to cut inside your lines!*
5. Brush a thin layer of Mod Podge onto the surface of your wood where your paper will be.  
*Spread it evenly and work quickly before it dries!*
6. Apply paper to surface, pressing down to eliminate any air bubbles.  
*Let the adhesive dry before moving on to Step 7.*
7. For areas with glitter:  
Place the craft on top of a piece of clean paper.  
Use a brush to apply Mod Podge to the area where you want glitter, then sprinkle glitter over wet Mod Podge.  
*Spray with a clear coat to protect glitter when dry!*
8. Apply a thin layer of Mod Podge or clear coat on top of your paper to seal and protect it. *Let dry completely!*  
*We use spray over glitter areas, and Mod Podge over vinyl.*  
*TEST the spray on a sample piece first so you don't get undesired results on your finished craft!*
9. Apply any sprinkles, wire, or ribbon after your top coat of Mod Podge has dried.
10. Use wire, ribbon, or screw eyes to attach each piece to your ladder. *Tape can hold a piece in place while you attach!*
